

## How to Install Presets for Lightroom 4

Here are the installation instructions for installing presets into Lightroom 4.

### Mac OS X

1. Download and unzip the presets file and open the resulting folder.
2. In this folder you will find the presets, they are the files with the .lrtemplate extension.
3. Open Lightroom 4.
4. Choose Lightroom>Preferences.
5. There will be a new window that appears. There will be several tabs at the top of the new window. Select the Presets tab.
6. Click on the button labeled Show Lightroom Presets Folder.
7. There will be a new Finder window that appears. Choose the folder named Develop Presets. Copy the downloaded folder with your presets into the Develop Presets folder. It is recommended that you copy the preset folder to this new location rather than moving it from its original location.
8. Simply restart Lightroom and that's it. Your presets can now be found in the Presets section of the Develop module of Lightroom.

### Windows

1. Download and unzip the presets file and open the resulting folder.
2. In this folder you will find the presets, they are the files with the .lrtemplate extension.
3. Open Lightroom 4.
4. Choose Edit>Preferences.
5. There will be a new window that appears. There will be several tabs at the top of the new window. Select the Presets tab.
6. Click on the button labeled Show Lightroom Presets Folder.
7. There will be a new Explorer window that appears. Choose the folder named Develop Presets. Copy the downloaded folder with your presets into the Develop Presets folder. It is recommended that you copy the preset folder to this new location rather than moving it from its original location.
8. Simply restart Lightroom and that's it. Your presets can now be found in the Presets section of the Develop module of Lightroom.
